

FRASER FIR TREATMENT INFORMATION

The trees have been treated with Lindane and Thionex for the common infestation of Balsam Wholly Adelgid by hose spraying method in the year of 2008. They will be treated for the common occurrence of Twig Aphid between now and bud break with mist blower sprayer using Dimethoate.

Fertility has been managed with applications of appropriate fertilizer: 18-46-0, 0-0-22, 43-0-0, trace elements and foliage feeding.

The trees have been freshly sheared.
